Matemática Discreta

Mini-prova 2 - 2011.1

Prof. Juliano Iyoda
Engenharia da Computação
14 de Abril de 2011

1. $\{1,0\ pt\}$ Dada a premissa $\neg(p \rightarrow p)$, prove que $(q \vee r)$. Justifique cada passo de prova com uma equação ou regra de inferência em anexo. A única **exceção** a esta regra é o uso de comutatividade e associatividade. Ou seja, as equações (10), (11), (12) e (13) podem ser usadas simultaneamente em 1 passo de prova.

   Resposta:

1. $\neg(p \rightarrow p)$	[Premissa]
2. $p \wedge (\neg p)$	[26 em (1)]
3. p	[42 em (2)]
4. $\neg p$	[42 em (2)]
5. $p \vee q$	[41 em (3)]
6. $\neg p \vee r$	[41 em (4)]
7. $q \vee r$	[45 em (6) e (7)]

2. $\{1,0\ pt\}$ Prove que $(A \cup (B - A)) = (A \cup B)$. Justifique cada passo de prova com uma equação ou regra de inferência em anexo. A única **exceção** a esta regra é o uso de comutatividade e associatividade. Ou seja, as equações (10), (11), (12), (13), (73), (74), (75) e (76) podem ser usadas simultaneamente em 1 passo de prova.
   Resposta:

$$
\begin{array}{lr}
A \cup (B - A) & \\
= \{x \mid (x \in A) \vee (x \in (B - A))\} & [57] \\
= \{x \mid (x \in A) \vee ((x \in B) \wedge (x \notin A))\} & [62] \\
= \{x \mid ((x \in A) \vee (x \in B)) \wedge ((x \in A) \vee (x \notin A))\} & [14] \\
= \{x \mid ((x \in A) \vee (x \in B)) \wedge ((x \in A) \vee \neg(x \in A))\} & [46] \\
= \{x \mid ((x \in A) \vee (x \in B)) \wedge \mathsf{T}\} & [20] \\
= \{x \mid (x \in A) \vee (x \in B)\} & [3] \\
= A \cup B & [57]
\end{array}
$$
