

LEA-5

u-blox 5 Modules for GPS and GALILEO

Data Sheet

Abstract

Technical data sheet describing the cost effective, high-performance u-blox 5 based LEA 5 series of GPS/GALILEO modules.

Features include A-GPS support, low power consumption, SuperSense® Indoor GPS providing best-in-class acquisition and tracking sensitivity, precision timing and an innovative jamming-resistant RF architecture. The compact 17.0 x 22.4 mm form factor of the highly successful LEA-4 series is maintained, enabling easy migration. The LEA 5 series supports passive and active antennas.

Objective Specification	This data sheet contains target or goal specification for product development.
Preliminary	This data sheet contains preliminary data, revised and supplementary data may be published later.
Released	This data sheet contains the final product specification.

	Products marked with this lead-free symbol on the product label comply with the "Directive 2002/95/EC of the European Parliament and the Council on the Restriction of Use of certain Hazardous Substances in Electrical and Electronic Equipment" (RoHS).
	This is an Electrostatic Sensitive Device (ESD). Observe precautions for handling.

1 Functional Description

1.1 Overview

The LEA-5 module series by u-blox sets a new standard for GPS and GALILEO receiver modules. Featuring the high performance 50-channel u-blox 5 technology, these modules provide excellent performance and flexibility at an economical price. A 32-channel acquisition engine with over 1 million effective correlators is capable of massive parallel searches. This enables a Time To First Fix (TTFF) of less than 1 second, while long correlation/dwell times make possible the best-in-class acquisition and tracking sensitivity. An available functionality is KickStart, a new feature enabling accelerated acquisition of weak signals. Once acquired, satellites are passed on to a power-optimized dedicated tracking engine. This arrangement allows the GPS and GALILEO engine to simultaneously track up to 16 satellites while searching for new ones. u-blox 5's advanced jamming suppression mechanism and innovative RF architecture provide a high level of immunity to jamming, ensuring maximum GPS and GALILEO performance.

The LEA-5 series maintains the compact 17.0 x 22.4 mm form factor of the highly successful LEA-4 modules. The modules have been designed with backwards compatibility in mind, enabling ease of upgrade and reducing engineering and design costs. A USB port is available for faster data transmission and more flexibility. The optional FLASH EPROM provides capacity to store user-specific configuration settings and allows for future updates. The LEA-5 series includes two cost optimized u-blox 5 LITE versions: the LEA-5Q and LEA-5M.

LEA-5 modules are not designed for life saving or supporting devices or for aviation and should not be used in products that could in any way negatively impact the security or health of the user or third parties or that could cause damage to goods.

1.2 Highlights and Features

Highlights

- Time To First Fix (TTFF): < 1 sec
- Best-in-class acquisition and tracking sensitivity
- Receives GPS and GALILEO signals
- A-GPS: Supports u-blox AssistNow Online and Offline, OMA SUPL compliant
- High immunity to jamming
- UART serial port, USB, DDC (I²C compatible)
- Precision Timing option

Features

	Voltage Range (V)	Thickness (mm)	50-channel engine	KickStart	SuperSense	FW Update / FLASH	Low Power Modes	UART	USB	SPI	DDC	AssistNow Online	AssistNow Offline	Dead Reckoning	Raw Data	Precision Timing	1PPS	CFG Pins	Reset Input	Antenna Supply	Antenna Supervisor
LEA-5H	2.7-3.6	3.0	✓	✓	✓	✓	P	1	1		1	✓	✓				✓		✓	✓	✓
LEA-5S	2.7-3.6	3.0	✓	✓	✓			1	P		1	✓	✓				✓	1	✓	✓	✓
LEA-5A	2.7-3.6	3.0	✓		✓			1	P		1	✓	✓				✓	1	✓	✓	✓
LEA-5Q	2.7-3.6	2.4	✓	✓	✓			1	1	1	1	✓	✓				✓	3	✓

Table 1: Features of the LEA-5 Series

1.3 GPS Performance

Parameter	Specification
Receiver Type	50 Channels GPS L1 frequency, C/A Code GALILEO Open Service L1 frequency
Time-To-First-Fix ¹	LEA-5H/ LEA-5S/ LEA-5T/ LEA-5Q LEA-5A/ LEA-5M
	Cold Start (Autonomous) 29 s 32s
	Warm Start (Autonomous) 29 s 32s
	Hot Start (Autonomous) <1 s <1s
Aided Starts ² <1 s <3s	
Sensitivity ³	LEA-5H/ LEA-5S/ LEA-5T/ LEA-5Q LEA-5A/ LEA-5M
	Tracking & Navigation -160 dBm -160 dBm
	Reacquisition -160 dBm -160 dBm
Cold Start (Autonomous) -144 dBm -143 dBm	
Horizontal Position Accuracy ⁴	Autonomous < 2.5 m
	SBAS < 2.0 m
Accuracy of Timepulse Signal	RMS 30 ns
	99% <60 ns
	Compensated ⁵ (LEA-5T) 15 ns ³
Time Pulse	Configurable: 0.25 ... 1000 Hz
Max Navigation Update Rate	4 Hz
Velocity Accuracy ⁶	0.1m/s
Heading Accuracy ⁶	0.5 degrees
Dynamics	≤ 4 g
Operational Limits	Velocity 515 m/s (1000 knots)

Table 2: LEA-5 GPS Performance

¹ All satellites at -130 dB

² Dependent on aiding data connection speed and latency

³ Demonstrated with a good active antenna

⁴ CEP, 50%, 24 hours static, -130dBm

⁵ Quantization error information can be used to compensate the granularity related error of the time pulse signal.

⁶ 50% @ 30 m/s

1.4 Block Diagram

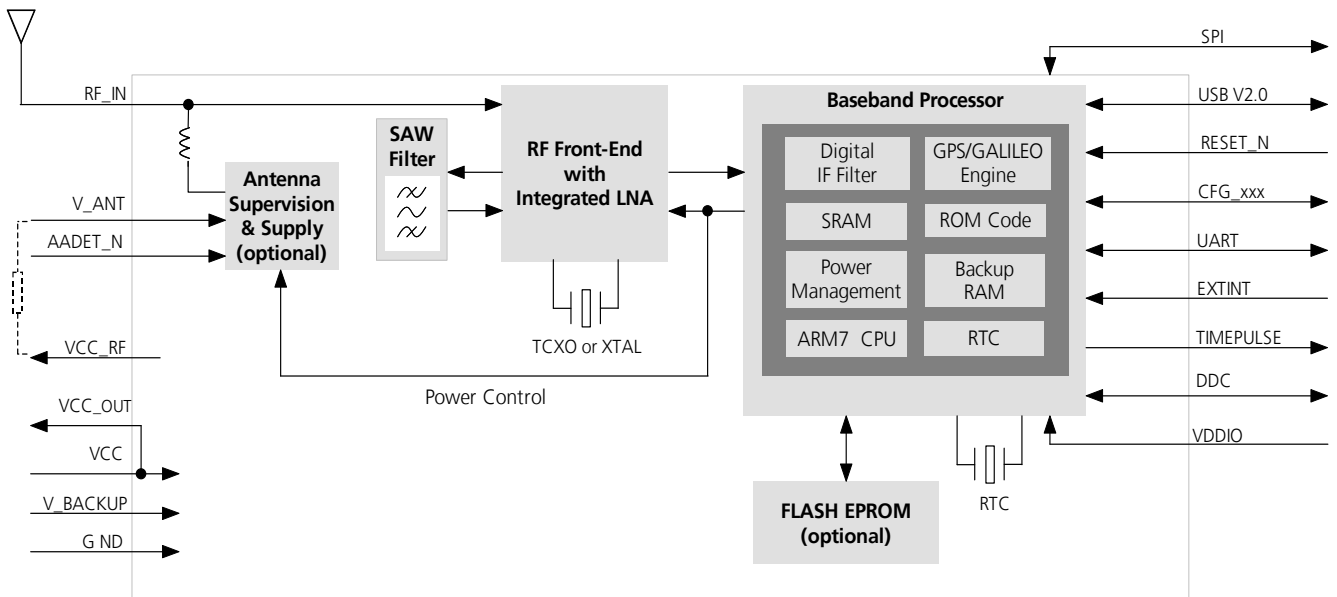

Figure 1: Hardware Block Schematic

1.5 Assisted GPS (A-GPS)

Supply of aiding information like ephemeris, almanac, rough last position and time and satellite status and an optional time synchronization signal will reduce time to first fix significantly and improve the acquisition sensitivity. All LEA-5 modules support the u-blox AssistNow Online and AssistNow Offline A-GPS services and are OMA SUPL compliant.

1.6 SuperSense Indoor GPS

All u-blox 5 ICs come with SuperSense, providing ultra-fast acquisition/reacquisition and exceptional tracking sensitivity. SuperSense enables best-in-class tracking and navigation in difficult signal environments such as urban canyons or indoor locations.

1.7 KickStart

A new feature available with u-blox 5 receiver modules is KickStart. This functionality uses a TCXO to accelerate weak signal acquisition, enabling faster start and reacquisition times. KickStart is available with the LEA-5H, LEA-5S, LEA-5Q and LEA-5T.

1.8 GALILEO

The u-blox 5 is a GNSS chip that receives and tracks GPS and GALILEO signals simultaneously, enhancing accuracy and coverage. When GALILEO-L1 signals become available, u-blox 5 receivers equipped with FLASH memory will be capable of receiving and processing them via a simple upgrade. The ability to receive and track GALILEO satellite signals will result in higher coverage, improved reliability and better accuracy.

1.9 Protocols

Protocol	Type
NMEA	Input/output, ASCII, 0183, 2.3 (compatible to 3.0)
UBX	Input/output, binary, u-blox proprietary

Table 3: Available Protocols

Both protocols are available on UART, USB, DDC and SPI. For specification of the various protocols see the *u-blox 5 Protocol Specification* [2].

1.10 Antenna

LEA-5 modules are designed for use with passive and active antennas.

An optional antenna supervisor is available with the LEA-5H, LEA-5S, LEA-5A and LEA-5T. In the default operation mode the antenna supervisor is activated and enables the receiver to detect short circuits to the active antenna by checking the bias voltage level and can shut down the voltage bias immediately. A series resistor is needed in front of the **V_ANT** input. UBX and NMEA messages are provided to report the condition of the antenna supply. Open circuit detection can also be supported with an additional external circuit. For details, please refer to the *LEA-5 Hardware Integration Manual* [1].

The LEA-5Q and LEA-5M do not support the antenna supply and antenna supervisor functionalities.

Parameter	Specification	
Antenna Type	Passive and active antenna	
Active Antenna Recommendations	Minimum gain	15 - 20 dB (to compensate signal loss in RF cable)
	Maximum noise figure	1.5 dB
	Maximum gain	50 dB

Table 4: Antenna Specifications for all LEA-5 Modules

Parameter	Specification	
Antenna Supply	Using VCC_RF or external voltage source	
Antenna Supervisor	Short circuit detection	Built-in
	Open circuit detection	Enabled with external circuit

Table 5: Antenna Supervisor Specifications for LEA-5H, LEA-5S, LEA-5A and LEA-5T

1.11 Configuration

1.11.1 Power Modes

u-blox 5 technology offers power optimized architecture with built-in autonomous power saving functions that minimize power consumption at any given time.

u-blox 5 can be operated in two different power modes: Maximum Performance and Eco Mode. In both cases, the receiver is operated in continuous mode. The difference lies in how the acquisition engine is used. Maximum Performance Mode freely uses the acquisition engine, resulting in the best possible TTFF at weak signals. With Eco Mode the use of the acquisition engine is optimized to deliver lower current consumption.

Low Power Modes are planned for Q1/09.

For more information, see the *u-blox 5 Protocol Specification [2]*.

1.11.2 Boot-Time Configuration (LEA-5A, LEA-5M, LEA-5Q, LEA-5S)

ROM-based modules provide up to 3 pins (**CFG_COM0**, **CFG_COM1**, **CFG_GPS0**) for boot-time configuration. These become effective immediately after start-up. Once the module has started, the configuration settings can be modified with UBX configuration messages. The modified settings remain effective until power-down or reset. If these settings have been stored in battery-backup RAM, then the modified configuration will be retained, as long as the backup battery supply is not interrupted.

LEA-5A and LEA-5S include only **CFG_COM1** and can be configured as seen in Table 6.

CFG_COM1	Protocol	Messages	UART Baud rate
1	NMEA	GSV, RMC, GSA, GGA, GLL, VTG, TXT	9600
0		GSV ⁷ , RMC, GSA, GGA, VTG, TXT	4800

Table 6: Supported CFG_COM1 settings (LEA-5A, LEA-5S)

LEA-5Q and LEA-5M include both **CFG_COM0** and **CFG_COM1** pins and can be configured as seen in Table 7.

CFG_COM1	CFG_COM0	Protocol	Messages	UART Baud rate	USB Power
1	1	NMEA	GSV, RMC, GSA, GGA, GLL, VTG, TXT	9600	BUS Powered ⁸
1	0			38400	Self Powered
0	1		GSV ⁷ , RMC, GSA, GGA, VTG, TXT	4800	BUS Powered ⁸
0	0	UBX	NAV-SOL, NAV-STATUS, NAV-SVINFORM, NAV-CLOCK, INF, MON-EXCEPT	57600	BUS Powered ⁸

Table 7: Supported COM settings (LEA-5Q, LEA-5M)

LEA-5Q includes a **CFG_GPS0** pin, which enables the boot-time configuration of the power mode. These settings are described in Table 8.

CFG_GPS0	Power Mode
0	Eco Mode
1	Maximum Performance Mode

Table 8: Supported CFG_GPS0 settings (LEA-5Q)

Static activation of the **CFG_COM** pins is not compatible with use of the SPI interface.

⁷ Every 5th fix.

⁸ Planned availability Q1/09

1.11.3 Configuration (LEA-5H, LEA-5T)

With the LEA-5H and LEA-5T, configuration settings modified with UBX configuration messages can be saved to the FLASH memory. In this case the modified settings remain effective even after power-down and don't require backup battery supply.

For more information, see the *u-blox5 Protocol Specification [2]*.

1.12 LEA-5T

1.12.1 Time Mode

LEA-5T provides a special Time Mode to provide higher timing accuracy. The LEA-5T is designed for use with stationary antenna setups. The Time Mode features three different settings described in Table 9: Disabled, Survey-In and Fixed Mode.

Time Mode Settings	Description
Disabled	Standard PVT operation
Survey-In	The GPS receiver computes the average position over an extended time period until a predefined maximum standard deviation has been reached. Afterwards the receiver will be automatically set to Fixed Mode and the timing features will be activated.
Fixed Mode	In this mode, a fixed 3D position and known standard deviation is assumed and the timing features are activated. Fixed Mode can either be activated directly by feeding pre-defined position coordinates (ECEF - Earth Center Earth Fixed format) or by performing a Survey-In . In Fixed mode, the timing errors in the TIMEPULSE signal which otherwise result from positioning errors are eliminated. Single-satellite operation is supported. For details, please refer to the <i>u-blox5 Protocol Specification [2]</i> .

Table 9: Time Mode Settings

1.12.2 Time Mark

LEA-5T can be used for precise time measurements with sub-microsecond resolution using the external interrupt (EXTINT0). Rising and falling edges of these signals are time-stamped to the GPS or UTC time and counted. The Time Mark functionality can be enabled with the UBX-CFG-TM2 message

For details, please refer to the *u-blox5 Protocol Specification [2]*.

2 Mechanical Specifications

Parameter	Specification	
A	22.4 +0.6/-0.1mm	[882 +24/-4mil]
B	17.0 ±0.1mm	[669 ±4mil]
C	3.0 ⁹ /2.4 ¹⁰ ±0.3mm	[118 ⁹ /97 ¹⁰ ±12mil]

3 Electrical Specifications

3.1 Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Units
Power supply voltage (VCC)	Vcc	-0.5	3.6	V
Backup battery voltage (V_BCKP)	Vbckp	-0.5	4.8	V
Input pin voltage	Vin	-0.5	3.6	V
	Vin_usb	-0.5	Vddusb +0.5	V
VCC_RF output current	Iccrf		100	mA
Antenna bias voltage	Vant		6	V
Antenna bias current ¹¹	Iant		100	mA
Storage temperature	Tstg	-40	85	°C

Table 12: Absolute Maximum Ratings

Stressing the device beyond the “Absolute Maximum Ratings” may cause permanent damage. These are stress ratings only. The product is not protected against overvoltage or reversed voltages. If necessary, voltage spikes exceeding the power supply voltage specification, given in table above, must be limited to values within the specified boundaries by using appropriate protection diodes.

¹¹ Applied via V_ANT

3.2 Operating Conditions

Parameter ¹²	Symbol	Min	Typ	Max	Units	Condition
Power supply voltage (VCC)	Vcc	2.7		3.6	V	
I/O supply voltage (VDDIO)	Vddio	1.65	3.3	3.6	V	
Peak supply current ¹³	Iccp			150	mA	Vcc = 3.6 V
Sustained supply current ¹⁴	Maximum Performance Mode	Icc Acquisition	102		mA	Vcc = 3.0 V
		Icc Tracking	47 ¹⁵			
	Eco Mode	Icc Acquisition	67			
		Icc Tracking	42 ¹⁶			
Backup battery voltage	Vbckp	1.4		4.8	V	
Backup battery current	Ibckp		25		µA	Vbckp = 1.8V
Input pin voltage range	Vin			Vcc +0.5	V	
Input pin low voltage	Vin_low_1			0.2x Vcc	V	
Input pin high voltage	Vin_high_1	0.7x Vcc			V	
Input pin low voltage for EXTINT0 and RxD1	Vin_low_2			0.22	V	
Input pin high voltage for EXTINT0 and RxD1	Vin_high_2	0.91			V	
Output pin low voltage	Vout_low			0.4	V	Iout = 4 mA
Output pin high voltage	Vout_high	Vcc – 0.4 ¹⁷			V	Iout = -4 mA
		Vddio – 0.4 ¹⁸			V	Iout = -4 mA
VDDUSB (Pin 24) for USB operation	Vddusb1	3.0 ¹⁹		3.6	V	
USB_DM, USB_DP	VinU	Compatible with USB with 27 Ohms series resistance				
Antenna gain	Gant			30	dB	
V_ANT antenna bias voltage	Vant	2.7		5.5	V	I _{ANT} < -50 mA
Antenna bias voltage drop	Vant_drop		0.1		V	Iccrf=50mA
VCC_RF voltage	Vccrf		Vcc-0.1		V	
VCC_RF output current	Iccrf			50	mA	
Operating temperature	Topr	-40		85	°C	

Table 13: Operating Conditions

Operation beyond the "Operating Conditions" is not recommended and extended exposure beyond the "Operating Conditions" may affect device reliability.

¹² All specification are at an ambient temperature of 25°C.

¹³ Use this figure to dimension maximum current capability of power supply.

¹⁴ Use this figure to determine required battery capacity.

¹⁵ All orbits available. Given value with FW 5.0. For earlier FW versions Icc Tracking Typ: 55mA.

¹⁶ Typical 1 minute after First Fix.

¹⁷ For LEA-5A, LEA-5S, LEA-5H, LEA-5T

¹⁸ For LEA-5M, LEA-5Q

¹⁹ If USB not used connect to GND

4 Reliability Tests

Tests for product family qualifications:

Test	Standard
Visual inspection	IPC-A-610 "Acceptability of electronic assemblies" I.T.R.I. Publication No. 700 IPC-SM-840B Class 2.
Thermal shock	-40°C...+125°C, 100 cycles
Function at various temperatures	-40°C/2 hours; RT/2 hours; +85°C/2 hours; function tests at stable temperature
Lifespan test	+85°C/1000 hours, in function
Damp heat, cyclic	+25°C...+55°C; >90% Rh
Vibration	10-500 Hz; 2 hours/axis; 5g
Shock	30g/11ms (half sine); 3 Shock/axis; no function
Metallographic investigations	IPC-QE-650

Table 14: Reliability Tests

This specification is preliminary and subject to confirmation.

5 Design-In

In order to obtain the necessary information to conduct a proper design-in, u-blox strongly recommends consulting the *LEA-5 Hardware Integration Manual* [1].

6 Default Settings

Interface	Settings
Serial Port 1 Output	9600 Baud, 8 bits, no parity bit, 1 stop bit Configured to transmit both NMEA and UBX protocols, but only following NMEA and no UBX messages have been activated at start-up: GGA, GLL, GSA, GSV, RMC, VTG, TXT
USB Output	Configured to transmit both NMEA and UBX protocols, but only following NMEA and no UBX messages have been activated at start-up: GGA, GLL, GSA, GSV, RMC, VTG, TXT USB Power Mode: Bus-Powered ²⁰
Serial Port 1 Input	9600 Baud, 8 bits, no parity bit, 1 stop bit Automatically accepts following protocols without need of explicit configuration: UBX, NMEA The GPS receiver supports interleaved UBX and NMEA messages.
USB Input	Automatically accepts following protocols without need of explicit configuration: UBX, NMEA The GPS receiver supports interleaved UBX and NMEA messages. USB Power Mode: Bus-Powered ²⁰
TIMEPULSE (1Hz Nav)	1 pulse per second, synchronized at rising edge, pulse length 100ms
Power Mode	LEA-5H, LEA-5Q, LEA-5S, LEA-5T: Maximum Performance Mode LEA-5A, LEA-5M: Eco Mode

Table 15: Available Protocols.

Please refer to the *LEA-5 Hardware Integration Manual* [1] for information about further settings.

²⁰ Planned availability Q1/09 for ROM-based modules (LEA-5S, LEA-5A, LEA-5Q, LEA-5M)

7 Ordering Information
